WILLS'S CIGARETTES

Electric Tram.

The electrically driven car has almost entirely superseded the old-fashioned horse-drawn tram. The first electric tram-car was run at Leytonstone, Essex, in 1882. The trolley pole seen at the top of most electric cars has nothing to do with the actual driving of the car, but simply conducts the electricity from the over-head wire, through the motor-man's switchbox, to the motor beneath the car.
